## Installation Guide: Liberty™ and Freedom™ LC Lightbars

## Safety First

This document provides all the necessary information to allow your Whelen product to be properly and safely installed. Before beginning the installation and/or operation of your new product, the installation technician and operator must read this manual completely. Important information is contained herein that could prevent serious injury or damage.

- Proper installation of this product requires the installer to have a good understanding of automotive electronics, systems and procedures.
- If mounting this product requires drilling holes, the installer MUST be sure that no vehicle components or other
  vital parts could be damaged by the drilling process. Check both sides of the mounting surface before drilling
  begins. Also de-burr any holes and remove any metal shards or remnants. Install grommets into all wire
  passage holes.
- If this manual states that this product may be mounted with suction cups, magnets, tape or Velcro®, clean the mounting surface with a 50/50 mix of isopropyl alcohol and water and dry thoroughly.
- Do not install this product or route any wires in the deployment area of your air bag. Equipment mounted or
  located in the air bag deployment area will damage or reduce the effectiveness of the air bag, or become a
  projectile that could cause serious personal injury or death. Refer to your vehicle owner's manual for the air bag
  deployment area. The User/Installer assumes full responsibility to determine proper mounting location, based
  on providing ultimate safety to all passengers inside the vehicle.
- For this product to operate at optimum efficiency, a good electrical connection to chassis ground must be made. The recommended procedure requires the product ground wire to be connected directly to the NEGATIVE (-) battery post.
- If this product uses a remote device to activate or control this product, make sure that this control is located in an area that allows both the vehicle and the control to be operated safely in any driving condition.
- Do not attempt to activate or control this device in a hazardous driving situation.
- This product contains either strobe light(s), halogen light(s), high-intensity LEDs or a combination of these lights. Do not stare directly into these lights. Momentary blindness and/or eye damage could result.
- Use only soap and water to clean the outer lens. Use of other chemicals could result in premature lens cracking (crazing) and discoloration. Lenses in this condition have significantly reduced effectiveness and should be replaced immediately. Inspect and operate this product regularly to confirm its proper operation and mounting condition. Do not use a pressure washer to clean this product.
- It is recommended that these instructions be stored in a safe place and referred to when performing maintenance and/or reinstallation of this product.
- FAILURE TO FOLLOW THESE SAFETY PRECAUTIONS AND INSTRUCTIONS COULD RESULT IN DAMAGE TO THE PRODUCT OR VEHICLE AND/OR SERIOUS INJURY TO YOU AND YOUR PASSENGERS!

For warranty information regarding this product, visit www.whelen.com/warranty

# IMPORTANT! The lightbar should be a minimum of 16" from any radio antennas!

#### Permanent Mounting:

- Locate the mounting foot, anchor plate and locking plate included with your lightbar. If not already present, install the locking plate onto the mounting foot. When properly positioned, this plate is centered from side-to-side on the mounting foot.
- Flip the lightbar upside-down to expose the bottom of the extrusion and place the mounting foot onto the extrusion.
- Rotate the mounting foot 90° counter-clockwise. Make sure that the edges
  of the mounting foot swing into position under the extrusion mounting lip.
  Install an anchor plate onto the extrusion in the same manner.
- Repeat this procedure for the remaining mounting foot and anchor plate and return the lightbar to its right side-up position.
- 5. Position the lightbar onto the vehicle roof in the desired mounting location. One often selected location is directly above the B-pillars. This area is the strongest part of the roof. Refer to your lightbar manual for cable exit location, to be sure that the lightbar is facing the proper direction.
- 6. Adjust the two mounting feet outwards so that they are as close to the edge of the roof as possible. Both mounting feet must be in full contact with the roof. Be sure that there is no less than 1/2" clearance between roof and lightbar at their closest point. When the mounting feet are in their proper position, lightly tighten the locking plate allen head set screws.
- 7. Return the lightbar to an upside-down position. Slide each anchor plate outwards until it is fully engaged with its corresponding mounting foot. With the mounting feet and anchor plates in their proper positions firmly tighten all of the set screws (2 or 4 per side). Flip the lightbar right side-up and return it to its mounting position.
- Open both drivers side doors. In the area directly below the mounting foot, pull the weather-strip away from the vehicle so the area where the mounting strap will be secured is exposed. Repeat for the other side.
- Insert the mounting strap through the mounting foot. Be sure that the strap fits flush against the area where it will be secured onto the vehicle. Insert the tension bolt through the mounting strap and anchor plate, into the

tinnerman nut. Tighten slightly with a long-shafted, Phillips screwdriver. Repeat procedure for passenger side.

- 10. If your mounting strap has mounting holes in the end of the strap, use these holes as a template to drill appropriately sized pilot holes through the strap and into the vehicle. Repeat for passenger side of the vehicle.
- 11. Firmly tighten the tension bolts to secure the lightbar to the vehicle.

#### Strap Mounting:

- Locate the mounting foot, anchor plate and locking plate included with your lightbar. If not already present, install the locking plate onto the mounting foot. When properly positioned, this plate is centered from side-to-side on the mounting foot.
- 2. Flip the lightbar upside-down to expose the bottom of the extrusion and place the mounting foot onto the extrusion.
- Rotate the mounting foot 90° in a counter-clockwise direction. Make sure
  that the edges of the mounting foot swing into position under the extrusion
  mounting lip. Install an anchor plate onto the extrusion in the same
  manner.
- Repeat this procedure for the remaining mounting foot and anchor plate and return the lightbar to its right side-up position.
- 5. Position the lightbar onto the vehicle roof in the desired mounting location. One often selected location is directly above the B-pillars. This area is the strongest part of the roof. Refer to your lightbar manual for cable exit location, to be sure that the lightbar is facing the proper direction.
- Adjust the two mounting feet outwards so that they are as close to the edge of the roof as possible. Both mounting feet must be in full contact with the roof. Be sure that there is no less than 1/2" clearance between roof and

- lightbar at their closest point. When the mounting feet are in their proper position, lightly tighten the locking plate allen head set screws.
- 7. Return the lightbar to an upside-down position. Slide each anchor plate outwards until it is fully engaged with its corresponding mounting foot. With the mounting feet and anchor plates in their proper positions firmly tighten all of the set screws (2 or 4 per side). Flip the lightbar right side-up and return it to its mounting position.
- Open both drivers side doors. In the area directly below the mounting foot, pull the weather-strip away from the vehicle so the area where the mounting strap will be secured is exposed. Repeat for the other side.
- 9. Insert the mounting strap through the mounting foot. Be sure that the strap fits flush against the area where it will be secured onto the vehicle. Insert the tension bolt through the mounting strap and anchor plate, into the tinnerman nut. Tighten slightly with a long-shafted, Phillips screwdriver. Repeat procedure for passenger side.
- 10. If your mounting strap has mounting holes in the end of the strap, use these holes as a template to drill appropriately sized pilot holes through the strap and into the vehicle. Repeat for passenger side of the vehicle.

NOTE: Model MKAJ is an adjustable mounting foot. On this model you may loosen the screws on the rear of the foot and adjust the angle of the lightbar. This feature can be used if the angle of the roof is not level with the road.

IMPORTANT: To adjust the leveling screws you must use a torque wrench set at 35 to 40 in./lbs.

#### Routing your Lightbar Cable(s)

 To protect the headliner from damage caused by drilling the cable access hole through the vehicle roof, allow a 5" to 7" distance between roof and headliner by lowering the headliner before drilling.

WARNING! There may be a roof support member that spans the distance between the driver's and passenger's side. DO NOT DRILL THROUGH THIS MEMBER! Adjust the location until the hole can be drilled without contacting this support member.

- 2. Using a 1" hole saw, drill the cable access hole. Use a round file to smooth and de-burr the edges than insert a 1" grommet.
- Insert the cable(s) through the cable access hole into the vehicle. Use RTV silicone to weatherproof the access hole after the cable(s) are pulled completely into the vehicle.
- Route the cable(s) through the vehicle following manufacturers recommendations.

WARNING: Many vehicles are now equipped with side curtain and Bpillar air bags. Alternate routing may be required.

#### Connecting the Cables:

WARNING! All Customer supplied wires that connect to the positive terminal of the battery must be sized to supply at least 125% of the maximum operating current and FUSED at the battery to carry that load. DO NOT USE CIRCUIT BREAKERS WITH THIS PRODUCT!

#### **Power Cable:**

- Open the wiring shield lid and route the power cable into the wiring shield and towards the firewall. Make sure you do not to pinch or crush any wires when running them through the wire shield.
- Follow the factory wiring harness through the firewall. It may be necessary to drill a hole in the firewall. If so, be absolutely sure that there are no components that could be damaged by drilling. After the hole has been drilled, insert a grommet to protect the cable.
- Route the cable along the factory wiring harness to the battery. 3
- Install a 30 amp fuse block (customer supplied) on the end of the RED wire in the power cable. Remove the fuse from the fuse block before connecting any wires to the battery.
- Connect the fuse block to the POSITIVE (+) terminal on the battery. There can not be more than two feet of wire between the fuse block and the battery. The wire between the fuse block and the battery is "unprotected", do not allow this wire to touch any other wires.
- Connect the BLACK wire to the factory chassis ground.

## Cruise Lights & AUX (WHITE/ORANGE):

The WHITE/ORANGE wire operates in one of 3 different modes. Selecting a mode is controlled with the Scan-Lock™ wire. Using Scan-Lock™ (See Scan-Lock™), change between the 3 available modes as though you were changing flash patterns. The three modes are as follows:

MODE 1 (Default) - Cruise Lights in Low Power and the AUX port is activated.

MODE 2 - Cruise Lights in High Power and the AUX port is activated.

MODE 3 - Cruise Lights are not activated and the AUX port is activated.

#### Hi/Low Power (VIOLET):

The type of switch used is dependant on how the operator wishes the Hi/Low feature to function:

Latching Mode: By applying +12 VDC voltage to the VIOLET wire for less than 1 second, the lightbar is "latched" into low power operation. The unit must be turned off and then back on to restore normal, high power operation (a momentary switch is preferred).

Level Mode: Applying +12 VDC voltage to the VIOLET wire for more than 1 second holds the lightbar in low power mode until voltage is removed (a toggle switch is preferred).

IMPORTANT NOTE: The corner modules in your lightbar do not switch to low power when this option is applied. They will always remain in normal high power.

## Scan-Lock™ (WHITE/VIOLET):

TO CYCLE FORWARD THROUGH AVAILABLE PATTERNS: Activate ONLY the control wire of the function you wish to effect and apply +12 volts to the Scan-Lock™ wire (WHITE/VIOLET) for less than 1 second and release. This will change the pattern. For example, to change the Front Outboard LED pattern, apply +12VDC to the GREEN/WHITE wire and then *momentarily* apply +12VDC to the WHITE/VIOLET wire. Repeat until the desired pattern is displayed. Let this pattern run for 5 seconds to configure it as the pattern the Front Outboard LEDs will display when activated. Important: Only ONE function may be active while changing patterns. Repeat for next pattern.

TO CHOOSE A PATTERN: Allowing the desired pattern to run for more than 5 seconds makes it the default pattern.

TO RESET TO THE FACTORY DEFAULT PATTERN: Turn off all lightbar functions. Apply +12 volts to the Scan-lock™ wire and turn the appropriate function back on and it is now restored to its factory default pattern.

#### Available Flash Patterns:

#### Front Corner, Rear Corner, Outboard **Inboard and Center**

- 1. SignalAlert™ 75
- 2. CometFlash® 75
- 3. DoubleFlash 150
- 4. DoubleFlash 75
- 5. SingleFlash 375
- 6. SingleFlash 150
- 7. SingleFlash 75
- 8. ActionFlash™ 150 9. ModuFlash™
- 10. ActionScan™

#### Front Outboard, Inboard and Center

- SignalAlert™ 75
- 2. CometFlash® 75 3. DoubleFlash 150
- 4. DoubleFlash 75

- 5. SingleFlash 375
- 6. SingleFlash 150
- 7. SingleFlash 75
- 8. ActionFlash™ 150
- ModuFlash™
- 10. Steady/SF75
- 11. Steady/Steady 12 ActionScan™
- Take-Down / Alley

#### 1. T-D & Alley - SingleFlash 240 ALT

- 2. T-D & Alley DoubleFlash 120 ALT
- 3. T-D only SingleFlash 240 SIM
- 4. T-D only DoubleFlash 120 SIM

## Traffic Advisor™ Sequence

- 1. Seq to Solid
- 2. Seq On Seq Off
- 3. One Lamp Triple
- 4. Two Lamp Triple

Control Cable: Extend the control cable to your switch panel and make your connections using the information provided. The control cable connects to your control head or switch box and is fused there. Applying +12VDC to a control wire activates its function. Fuse as noted below.
